

# Alesis Fusion OS Upgrade

**You assume all responsibility for performing this process.**

For best results format your CF card using the Fusion. Most CF cards between 256 Mb & 2Gb will work with the Fusion. 256 Mb is fine for OS upgrades, 2 Gb is recommended if you plan on using it to transfer sound banks and/or songs to or from the Fusion.

Download the Fusion OS version 1.24 from the Alesis website to your computer.

[http://alesis.com/company/media2.php?download\\_id=WTIHZlc%2FUzQ%3D](http://alesis.com/company/media2.php?download_id=WTIHZlc%2FUzQ%3D)

Unzip the OS image file on your computer and copy it to your CF card that you previously formatted using the Fusion.

With the Fusion turned off insert the CF card containing the unzipped OS file **Fusion\_Image\_v124.bin** (about 62.5 mb in size) into the Fusion CF card slot.

Press and hold down the **B & 7** keys while you power up the Fusion.

When you are asked if you want to proceed with the upgrade select **YES**

When the OS upgrade is complete, remove the CF card.

Press **GLOBAL**, select **ITEM, MARK** all items, select **PROCESS**, select **VERIFY**.

When verification is complete turn the Fusion off, wait a couple minutes then turn it on.

You should be good to go.
